**Small, light weight, low power consumption
Ka-band Block Up Converters
Designed especially for man-pack and UAV applications**

Jersey's KABUC "Lite" Series - These Frequency Block Converters were specifically developed for applications that require high efficiency/low power consumption (12 Watts) and the lightest weight possible without sacrificing performance. These units meet the needs of the Wideband Gapfiller System's (WGS) hardware. Extending battery life and a more portable overall volume have been achieved. Weighing just under 20 ounces and a overall package size of 4.2" x 3.0" x 1.4".

*The high performance module is pictured above.

Typical "man-pack" pictured below*

The field proven qualified design (over 1,100 units shipped) has been re-packaged to address this mission critical goal. Jersey is the #1 provider of Ka-band BUCs to the WGS effort since the first launching of WGS-1. Our military band (30-31 GHz) block up converters are available with many standard options and features.
